

The Experimental Primary School of National Dong Hwa University

The Experimental Primary School of National Dong Hwa University has been actively promoting international education since 2007, aiming to broaden students' horizons and cultivate global competence. Through diverse international exchange activities, such as pen-pal exchanges, holiday card exchanges, and culture box exchanges, the school seamlessly integrates international education into its curricula. This inquiry-based approach fosters intercultural understanding and empowers students to become global citizens.

The school's dedicated teacher community plays a crucial role in promoting professional development and deepening curricula. With the support of engaged parents and abundant local resources, the school's international education initiatives are both localized and forward-thinking.

By combining strong international curricula, an active teacher community, and international exchange activities, the school bridges local experiences with global perspectives. This holistic approach enriches students' experiences, equips them with essential skills and knowledge, and prepares them to thrive in an increasingly interconnected world.

Students guide some foreign friends on a cultural exploration of traditional shops in Hualien

Investigating local organic agriculture

Students designed personalized travel plans for their Osaka adventure

After touring Osaka Castle, students presented group presentations to promote Taiwan to international tourists
