

Hello, we are from Be Dai High School, Sanxia, New Taipei City, Taiwan. We hope to have the chance to build up a partnership with your school and to create more exchange opportunities on the courses and activities for both students and faculties. Also, we are expecting to be the sister school with you in the future.

- About Bei Da High School:

Our school is located in the National Taipei University Special Zone, the southwest corner of New Taipei City. Established in 2014, it is the only high school in the region. There are eighteen classes in high school department and twelve in middle school department. We have 84 teachers and 1075 students in this small-scale school.

At the beginning of its establishment, diversity, gratitude, health, creativity, and sustainability were the core values of school, and "All-Around Education Well-known in the world " is the school's vision. In the process of promoting the new curriculum, all faculties and staff have also reached a consensus. It is hoped that students in this school will become the ones equipped with the ability of independent learning, group care, speculative expression, and international participation after the three years of training.

- About our exchange courses:

Students who join exchange activities are mainly from 10th and 11th grade. We invite our partners to experience our special courses and class activities. Programming project course, Sanxia course, and SDGs project course are all special courses of our school. Students can choose one they are interested in to take and through hands-on practice and class discussion, students from both schools can interact and get to know more about each other. It's also an incredible chance that teachers from both schools can do collaborative lesson discussion and preparation together.
