

Our school is committed to the development of information technology, bilingual teaching and reading promotion to cultivate students' diversified learning and development. We have specially planned a unique ecological environment in the school. The school is rich in a variety of fish native to Taiwan and has a tortoise area to allow students to be able to deeply understand the importance of biodiversity and ecological sustainable development, and become a practitioner of biological and ecological protection.

We also arrange diverse learning clubs for students to participate in after class, including football, in-line skating, sculpting, dance, ecology and other club activities. Various camp courses such as English, information, art, magic, etc. are also planned during winter vacation and summer vacation, so that students can study uninterrupted during the vacation.
